Industrial Needs

“The global groundwater abstraction rate has at least tripled over the past 50 years”.

The United Nations World Water Development Report 4. World Water Assessment Programme, March 2012.

“Worldwide, 87% of the population gets its drinking water from improved sources, and the corresponding figure for developing regions is also high at 84%”.

The United Nations World Water Development Report 4. World Water Assessment Programme, March 2012.

“Close to half of all people in developing countries suffering at any given time from a health problem caused by water and sanitation deficits”.

Human Development Report 2006, United Nations Development Program.

“By 2025 1.8 billion will be living in absolute water scarcity”.

Human Development Report 2006, United Nations Development Program.

Global Expertise in the Water Sector

Drawn from some of the best minds in the industry, Almar Water Solutions has deep knowledge and expertise in the successful development of water solutions.

Almar Water Solutions is a specialist provider of technical capabilities and expertise for water infrastructure development, including financing, design, engineering, and operation. Its dedicated team of accomplished professionals draws on international experience gained in over two decades across 25 international markets in the water industry and is today continuously working to develop integrated solutions to meet the growing needs of both municipal and industrial sectors.

Almar Water Solutions was established as part of Abdul Latif Jameel Energy and Environmental Services in 2016. With a solid financial standing and benefiting from the strong networks and long-established relationships of Abdul Latif Jameel, Almar Water Solutions tackles the challenges of water scarcity, quality and contamination from a uniquely holistic perspective.

5 million

Providing more than 5 million people with drinking water

25 countries

Across 25 countries on 4 continents

20 years

Gaining 20 years average individual experience

2.3 billion

Participating in closing projects worth US\$ 2.3 billion

A Reliable Resource within our Reach

Almar Water Solutions offers services across all phases of water infrastructure development from technology selection, project development and financing, to design and engineering and through to operation and maintenance of project assets.

Municipal Market

Water scarcity and contamination are among the biggest threats the world is facing both today and in the foreseeable future with the continued growth in world population. Responding to these challenges, Almar Water Solutions is uniquely positioned to develop tailored solutions in the municipal sector.

With a clear focus on environmental and social responsibility and aligned to regional and national government initiatives, Almar Water Solutions deploys its team's extensive experience to identify the most suitable integrated options for project feasibility and success to ensure that our client expectations are met.

Reuse

Industrial Market

Water is an indispensable resource in industrial applications and many processes cannot take place without it. Almar Water Solutions designs, develops, finances and operates supply and purification projects in the main sectors of industry.

With supply and purification, Almar Water Solutions develops projects aimed at the reuse of industrial water in the energy, pulp and paper, mining and food and beverage sectors (among others) contributing to decreasing the demand for water in areas suffering from water stress.

Assets are free of financial encumbrances

Risks associated with the construction, operation and maintenance of assets are transferred or mitigated

Unforeseen technical problems and possible deviations in the cost of their water needs are avoided

Water consumption in production processes is effectively managed

Environmental and Social Commitment

By combining expertise and resources with Fotowatio Renewable Ventures (FRV) – Abdul Latif Jameel Energy’s renewable energy business, and a recognized global leader in the sector – the issues of rising energy and water demand can be successfully addressed in a way that both reduces costs and increases availability of these essential resources. Together, they offer the capability to develop and deliver tailored real-world solutions and future developments.

Almar Water Solutions works hard to solve the problems of water scarcity and water quality, minimizing the environmental impact and contributing to the economic and social development of the countries in which it operates.

Fighting climate change is one of Almar Water Solutions’ commitments. Therefore, the company invests in water projects and sustainable water infrastructures that preserve the planet’s natural water resources. In addition, Almar Water Solutions applies renewable energy sources to water treatment processes, developing clean projects that respect the environment.

Almar Water Solutions also promotes social development and job creation initiatives to increase the cooperation and competitiveness of local communities.
